

ABSTRACT

In a system including a document collection, document templates specifying fixed information in the document collection, document data specifying variable information in the document collection, an information integration specification specifying a process for integrating the fixed information and the variable information, and a document generator to generate the document collection based on the document templates, the document data, and the information integration specification, a computer-implemented method is provided to receive input indicating modifications to fixed information in at least one of the documents in the document collection, and to modify the document templates to specify the modified fixed information in response to the input. Fixed information in the at least one of the documents may be modified to reflect the modifications indicated by the input. A second document collection may be generated that includes the variable information and the modified fixed information.
